

TRACER HYDRO SPRAY

TECHNICAL INFORMATION

WATER BASED SPRAY FOR TRACING

IDRO SPRAY is an acrylic, water based spray, suitable to trace, mark or delimit spaces, areas and hallways in the construction sites. Suitable for both vertical and horizontal walls. Ideal for internal or external surfaces like bitumen, asphalt, tiles, headstones, pilings, plastering, marbles, stone, masonry, wood, cement, plasterworks, foam, and generally for the materials particularly sensitive to the traditional solvents. The dry process of the product takes a few minutes. The product turns into its grid solid structure after 24 h.

The product, even when dry, can be painted over.

IDRO SPRAY is free of the typical products used for solvent based varnishes.

IDRO SPRAY odour, absent and characteristic, is totally different from the solvent based varnishes one. Upon request the product is also available in a spray can version with non flammable propellant.

It's easy to be removed. If the product is still humid it's enough to pass a dry cloth and/or dampened with water. If the product is already dry is needed a cloth damped with water, eventually with a detergent to be wiped on the part to be removed. To speed up the removal procedure the use of acetone and/or a nitro thinner is suggested.

INSTRUCTIONS FOR USE

Shake well before use. Clean the surface to be marked and spray from a distance of 10-15 cm with a fast and even movement. Do not insist by spraying a single part to avoid the excessive build-up of the product. Turn the cylinder upside down after the use and slightly push the valve to clean it.

It's advisable to try the product on a paperboard to become familiar with **IDRO SPRAY**.

To avoid the formation of foam (that anyway immediately disappears) it's important to make light coats and to respect the application distance.

TECHNICAL CHARACTERISTICS

Net content	400 ml
Look	Cylinder containing liquid under pressure
Colour several, available in four colours:	black, red, blue, yellow and white upon request
Odour	Odourless
